SUBUNIT: Homotrimer. Each subunit contains an activ in the central part of the hydrophobic core of the functions independently.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 FUNCTION: Catalyzes two steps in melanin biosynthesis. From scytalone they are two dehydration steps and one reduction steps and one reduction yield melanin.

CATALYTIC ACTIVITY: Scytalone = 1,3,8-trihydroxynaphthalene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1IDP;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a gene encoding scyralone dehydrogenase (SCDH), that functions in the presence of an inhibitor, comprising an optionally mutated, defined amino acid sequence given in the specification. Also disclosed is a method for evaluating rice blast fungus (Pyricularia oryzae) and Magnaporthe grisea sensitivity to scytalone dehydrogenase inhibitors. The gene is useful for screening for new SCDH inhibitors and evaluating sensitivity to them. The current sequence represents the

                                                                                                                                                                                                                                                                                                     The invention relates to a gene encoding scytalone dehydrogenase (SCDH), that functions in the presence of an inhibitor, comprising an optionally mutated, defined amino acid sequence given in the specification. Also disclosed is a method for evaluating rice blast fungus (Pyricularia oryzae) and Magnaporthe grisea sensitivity to scytalone dehydrogenase inhibitors. The gene is useful for screening for new SCDH inhibitors and evaluating sensitivity to them. The current sequence represents the Scytalone dehydrogenase DNA sequence. Note: gene sequence from this is given in ADC16592.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Scytalone dehydrogenase; SCDH; rice blast fungus; enzyme; inhibitor; gene; ds.
